KASEWARE
AI SERVICES

Powered by Microsoft Azure AI Services, Kaseware offers five powerful new features to revolutionize investigative work with the power of machine learning.

Vision

Utilize the power of advanced visual analytics models to scan images and automatically identify and label activities and objects within them in a single click. Insights derived from photos can then be searched, organized into cases or used in other analytic tools featured on the Kaseware platform.

Translator

Documents, messages, and other files can now be translated from 125+ languages and dialects, opening doors for communication across borders. Transcribed keywords remain searchable across all languages, allowing investigators to find precise search terms regardless of the language they were written in.

Speech-To-Text

Easily transcribe audio content from a variety of formats into text files with a single click. This text is then searchable and can be used with other Kaseware features like Case Management tools to organize and file documents, as well as Link Analysis software to uncover critical details between other pieces of evidence.

Improve Processes

Kaseware's Artificial Intelligence Services improve interdepartmental connectivity, transcend language barriers, and simplify the extraction and transformation of structured content from an organization's data.

Entity Extraction

Enhancements to the Kaseware Entity Extraction feature now allow it to automatically identify and better extract crucial insight from your data, quickly uncovering key information like addresses, names, and phone numbers automatically. Extracted data can be seamlessly integrated into users' cases and other investigative tools like Link Analysis and become easily searchable throughout the platform.

Optical Character Recognition

Existing OCR features on the Kaseware platform are undergoing a huge upgrade, now capable of recognizing multiple languages, including handwritten text. Scan and recognize text from English, French, German, Italian, Portuguese, Spanish, Chinese, Japanese, Korean, Russian, Arabic, Hindi and more!
